Anil Kumar

Senior Android Developer | Java, Kotlin | Jetpack Compose | Scalable Android Apps & SDKs

anilr098421@gmail.com +916360510935
Chandigarh, India LinkedIn - https://www.linkedin.com/in/anil-kumar-4bb094304/

SUMMARY

Senior Android Developer with 5+ years of experience building production-grade Android applications and SDKs for large-scale mobile platforms. Focused on reliability, performance, offline-first data layers, and scalable mobile architecture. Delivered measurable outcomes including a 25% reduction in production crashes and a 20% reduction in SDK size through modularization and build optimization.

EXPERIENCE

Software Developer Android

TurnoutNow

01/2025 - 08/2025 Lancaster, United States (Remote)

US-based event-tech company building AI-enabled event platforms, serving 100+ global clients at 500K+ annual attendee scale.

- Reduced Android SDK AAR size by 20% by modularizing internal components, trimming transitive dependencies, and optimizing R8 and build configuration for production deployments (based on build artifact comparison).
- Integrated AI-enabled support and analytics workflows into the Android SDK, reducing live-event attendee queries by 40% (measured via in-app support funnel and ticket volume).
- Redesigned BLE scanning and filtering pipelines to improve beacon detection accuracy by 35% under high-concurrency production conditions (measured via event telemetry).
- Reduced production crash rates by 25% (Crashlytics) by optimizing memory usage and improving background execution stability.
- Implemented offline-first data layer using local persistence (Room) and Work Manager-based background sync (retries/backoff), ensuring reliable event and attendee actions under intermittent connectivity and reducing user-visible sync failures (tracked via production telemetry).

Senior Android Developer

Code Brew Labs

08/2022 - 09/2024 Chandigarh, India

Engineering firm delivering Android and mobile applications for startup and enterprise clients across multiple domains.

- Drove architecture alignment across four Android apps (8-dev team) by tightening MVVM boundaries, reducing UI-data coupling, and improving coroutine-based state handling leading to a 35% increase in average session length (in-app analytics).
- Collaborated with DevOps teams on Jenkins- and Docker-based CI/CD pipeline workflows, improving Android build times by 25% and reducing deployment instability.
- Implemented secure authentication and encrypted data storage using Android Keystore, EncryptedSharedPreferences, and OAuth 2.0, enhancing runtime data protection and credential security.

Android Developer

Omninos Solutions

03/2020 - 05/2022 Chandigarh, India

Technology services firm delivering mobile applications for clients across multiple domains.

- Migrated nested callback-based flows to Kotlin Coroutines with structured concurrency and proper dispatcher usage (IO/Main), reducing UI blocking, improving app responsiveness by 20%, and lowering ANR occurrences (measured via Android Studio Profiler and QA benchmarks).
- Integrated real-time audio/video consultation workflows in Android using Agora RTC SDK, handling secure token exchange, call lifecycle events, and network-resilient reconnection flows in production.
- Implemented biometric authentication for Android user flows, improving secure access to sensitive app actions and strengthening on-device user protection.
- Handled end-to-end Android release lifecycle through Google Play Console, including versioning, staged rollouts, release monitoring, and hotfix coordination.

Embedded Software Developer

IBM

09/2018 - 12/2019 Bangalore, India

Enterprise technology company where I worked on embedded Linux and IoT systems.

- Contributed to optimizing network communication paths in embedded Linux/IoT systems, helping reduce latency by 30% and improving runtime responsiveness in enterprise deployments.
- Debugged and stabilized embedded Linux/IoT modules using log analysis and root-cause triage, improving production reliability.

PROJECTS

Event Copilot - AI-powered event assistant

2025 Lancaster, United States (Remote)

Android SDK and client-side feature development for AI-enabled attendee support and analytics.

- Engineered AI-enabled Android SDK workflows and modules for voice/text attendee assistance, exhibitor discovery, and real-time event guidance for production events.
- Deployed at NGAUS and NAB Show 2025, improving exhibitor engagement across 15+ top exhibitors.

Attendee Tracking - BLE Beacon-Based Smart Event Monitoring App

2025 Lancaster, United States (Remote)

BLE-based Android application migration and tracking workflow optimization for large-scale events.

- Executed end-to-end migration of a legacy attendee-tracking Android app to a modern SDK architecture and updated design guidelines for large-scale deployments (10,000+ attendees).
- Upgraded BLE beacon scanning, SDK integration, and real-time data synchronization to improve live tracking stability under high-density event conditions.

Grintafy - Football talent discovery platform in the Middle East

2023 Chandigarh, India

Developed Android features supporting club discovery and engagement workflows on a football talent platform.

- Built and optimized core Android discovery and engagement features on a high-traffic football talent platform, improving engagement flows and strengthening club-player connections by 25% (measured via in-app analytics).
- Implemented deep linking and navigation refinements across discovery and profile flows to improve journey continuity and state consistency under high user activity.

Gas It Up - US-based mobile fueling platform

2022 Chandigarh, India

Android application redesign and performance-focused improvements across scheduling, payments, and live tracking workflows.

- Redesigned key mobile workflows, integrating Smartcar-based vehicle connectivity and location-based features (Google Maps/Mapbox), improving usability and increasing daily active usage by 15% in production.
- Improved reliability of real-time status updates by refining background execution and lifecycle handling, reducing stale states.

My Pocket Health - Virtual Care

2021 Chandigarh, India

Worked on Android features for a virtual care platform, focusing on patient flows, secure authentication, and consultation workflows.

- Implemented personalization workflows for patient-facing Android features in a virtual care platform, improving user engagement by 30% (in-app analytics), while ensuring secure authentication and lifecycle-safe handling of sensitive health data.
- Improved reliability of virtual care workflows by refining UI and data state handling, ensuring consistent and resilient patient interactions across consultation and engagement flows.

SKILLS

Java **Kotlin** **RxJava** **Android Development** **Android SDK** **Jetpack Compose** **Design Patterns**

MVVM **Clean Architecture** **Multi-module Architecture** **MVC/MVP** **Coroutines** **LiveData** **Flow**

StateFlow **SharedFlow** **WorkManager** **Lifecycle** **Navigation** **Room** **SQLite** **Retrofit**

OkHttp **REST APIs** **Hilt** **Dagger** **Unit Testing** **JUnit** **Espresso** **Compose UI Testing** **Git**

CI/CD **Gradle / Maven configuration** **Memory Management** **Multithreading & Caching**

Background Execution **Deep Linking** **Android Keystore** **EncryptedSharedPreferences** **SQLCipher**

Firebase **BLE** **WebSockets** **IoT and Wearables** **View Binding** **Data Binding**

EDUCATION

Bachelor of computer applications

Chandigarh University

05/2017 Chandigarh, India
